Hardware Setup

## **Table of Contents**

For legacy SS7 links, you must have relevant SS7 cards installed along with their native libraries.

Restcomm SMSC supports dahdi based SS7 cards like diguim and sangoma as well as dialogic cards. Since dahdi based SS7 crads do not have MTP2/MTP3 support on board they rely on external software to provide these services. But dialogic based SS7 cards have on board support for MTP2/MTP3.

This guide does not provide installation instructions for SS7 hardware. You must refer to respective vendor documentation for installing and configuring the hardware cards. The following external links point to information that will assist you in setting up the hardware.

• Sangoma: http://wiki.sangoma.com/

• Diguim: http://www.digium.com/en/products/digital/

• Dialogic: http://www.dialogic.com/
